Engineering

**Sequence Patterns Mining
with
Generating unit data**

Centre for Maintenance Optimization and Reliability Engineering (C-MORE)

Objective

- There are some huge **data** produced through the **maintenance** of hydroelectric and fossil generating units.

UnitEvent	GDID	StateCode	ForcedOutageTyp	SynchronousConden	CommonMode	OCIDGE	Amplifica	Amplifica	AuxiliaryN	EodIndica	OutageTy	Comments	StartDateTime	FinishDateTime

Objective

- **Can Predict** the future behavior and future events of generating units and their components?
- Can **understand** the system health better?
- In this presentation:
 - Introduce ideas on applying **predictive and descriptive analytics of Machine Learning** for maintenance practices of generating units.

Case study

We have **continuous records** of the operating and outage data of each unit. (2013-2017)

State Code

Identifies the state of the unit during the indicated time interval

- Forced Outage (21)
- Maintenance Outage (24)
- Planned Outage (25)

- **OCIDGE** codes were developed from the System Classification Index (SCI) used to identify **equipment, systems,** and conditions.

OCIDGE: Outage Component Codes

Problem Definition

- Is there any relationship among **Outage Component Codes** with more frequently?

Frequent pattern

Association Rules

Sequence Pattern

Frequent
Pattern

What Is Frequent Pattern Analysis?

- **Frequent pattern**: a pattern (a set of items, subsequences, etc.) that occurs **frequently** in a data set.
- **Motivation**: Finding inherent rules in data
For example:
 - What products were often purchased **together**?
 - What are the **subsequent purchases** after buying a PC?

Frequent pattern

Association rule mining

- Proposed by **Agrawal et al in 1993**.
- It is an important **Data Mining** model studied extensively by the database and data mining community.
- Initially used for **Market Basket Analysis** to find how items purchased by customers are related. (frequent pattern)

Support & Confidence

Support: 4/5; Conf: 1

Support: 3/5; Conf: 1

Support: 4/5; Conf: 4/5

support, s , probability that a transaction contains X and Y

confidence, c , conditional probability that a transaction having X also contains Y

Association rules algorithms

- Scalable frequent pattern mining methods
 - Apriori (Candidate generation & test)
 - Projection-based (FPgrowth, CLOSET+, ...)
 - Vertical format approach (ECLAT, CHARM, ...)

Approaches and Data preparation

Consider only these state codes:

- Forced Outage (21) or Maintenance Outage (24) to a Planned Outage (25)

Delete some OCIDGE

- 99999
- 42100(Generator)

Used **Apriori** algorithm

- Number of rules =67
- Maximum number of antecedents: 5
- Minimum antecedent support (%): 20.0
- Minimum rule confidence (%): 70.0

Output

Generator And Auxiliaries → Generator Power Transformers (c=71.5%)

Circuit Breakers - Generator Voltage → Generator Power Transformers (c=80%)

Output

- (Excitation) → Generator And Auxiliaries (c=74%)
- (Excitation) → Generator Power Transformers (c=71%)
- Generator And Auxiliaries → Generator Power Transformers (c=71.5%)
- Circuit Breakers - Generator Voltage → Generator Power Transformers (c=80%)

- (Circuit Breakers - Generator Voltage) and (Generator Power Transformers) → (Brushes And Brush Rigging) (c=72%)
- (Headgates) → Brushes And Brush Rigging (c=73%)

Frequent pattern

Sequence Databases

- A sequence database consists of ordered elements or events
- Transaction databases vs. sequence databases

A transaction database

TID	itemsets
10	a, b, d
20	a, c, d
30	a, d, e
40	b, e, f

A sequence database

SID	sequences
10	<a(abc)(ac)d(cf)>
20	<(ad)c(bc)(ae)>
30	<(ef)(ab)(df)cb>
40	<eg(af)cbc>

Sequence Data

Sequence Database:

Object	Timestamp	Events
A	10	2, 3, 5
A	20	6, 1
A	23	1
B	11	4, 5, 6
B	17	2
B	21	7, 8, 1, 2
B	28	1, 6
C	14	1, 8, 7

Sequential Pattern Mining:

- Given:
 - a database of sequences
 - a user-specified minimum support threshold, *minsup* (*minimum support*)
- Task:
 - Find all subsequences with support \geq *minsup*

Studies on Sequential Pattern Mining

- Apriori-based method: **GSP** (Generalized Sequential Patterns: Srikant & Agrawal [EDBT'96])
- Pattern-growth methods: FreeSpan & **PrefixSpan** (Han et al. KDD'00; Pei, et al. [ICDE'01])
- Vertical format-based mining: **SPADE** (Zaki [Machine Learning'00])
- Constraint-based sequential pattern mining (**SPIRIT**: Garofalakis, Rastogi, Shim [VLDB'99]; Pei, Han, Wang [CIKM'02])
- Mining closed sequential patterns: **CloSpan** (Yan, Han & Afshar [SDM'03])

Approaches and Data preparation

Consider only these state codes:

- Forced Outage (21) or Maintenance Outage (24) to a Planned Outage (25)

(Generator Power Transformers) and (Maintenance Outage) → Forced Outage (c= 88.9%)

(Maintenance Outage) and (Bus Duct, Bus, Cable) → Forced Outage (c=89 %)

Time Gap Problem

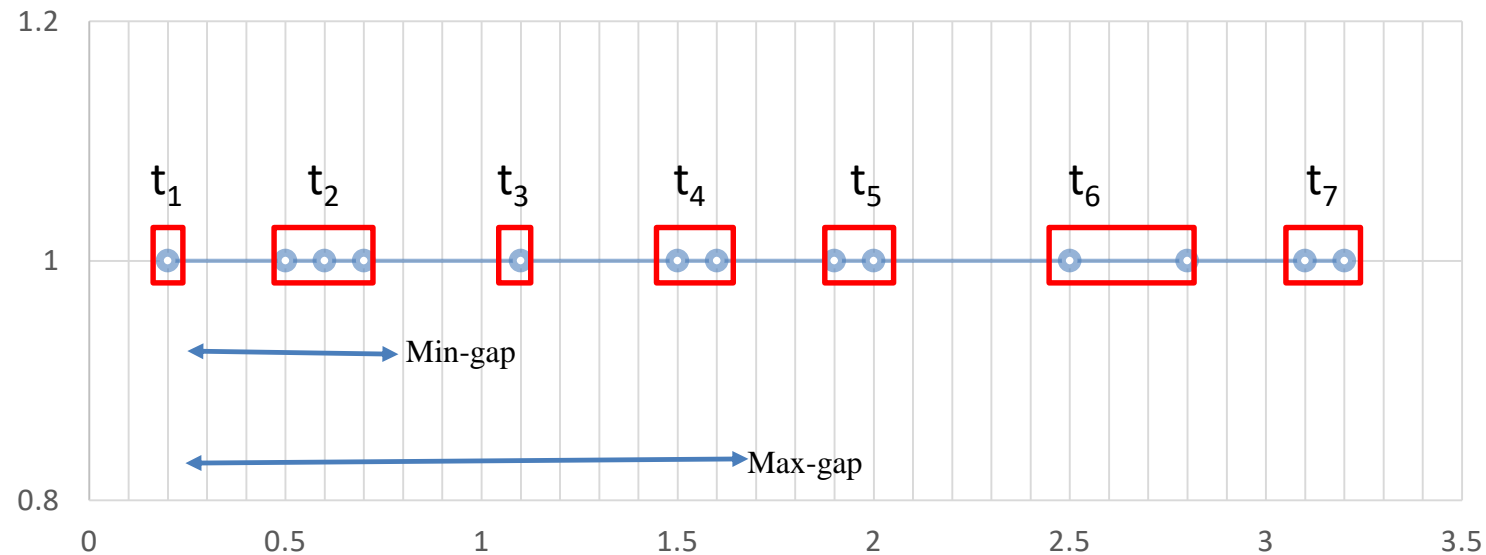

Are all sequence patterns interesting?

Time Gap Constraint in sequential pattern mining

- There are some challenges associated with this method, one of them is **Time Gap** constrain.
- In particular, when two events occur with a moderately **long time gap**, they cannot be considered as being part of the same sequence.

Time Gap Constraint in sequential pattern mining

- One of the important concern in Sequential pattern mining is the constraints of minimum and maximum gap between two consecutive events.

Constraints in sequential pattern mining

- A desired (time) gap between events in the discovered patterns is specified as a constraint:
- $\text{min gap} \leq \text{gap} \leq \text{max gap}$

Timing Constraints

max-gap = 2

Data sequence	Subsequence	Contained?
$\langle \{a,b\} \{c,d,e\} \{f,g\} \{h,i\} \{j\} \rangle$	$\langle \{e\} \{i\} \rangle$	Yes
$\langle \{a\} \{b\} \{c\} \{d\} \{e\} \rangle$	$\langle \{a\} \{e\} \rangle$	
$\langle \{a\} \{b,c\} \{d,e\} \{e,f\} \rangle$	$\langle \{b\} \{d\} \{g\} \rangle$	
$\langle \{a,b\} \{c\} \{d,e\} \{f,g\} \{h,i\} \{j,k\} \rangle$	$\langle \{a,b\} \{k\} \rangle$	

Timing Constraints

max-gap = 2

Data sequence	Subsequence	Contained?
$\langle \{a,b\} \{c,d,e\} \{f,g\} \{h,i\} \{j\} \rangle$	$\langle \{e\} \{i\} \rangle$	Yes
$\langle \{a\} \{b\} \{c\} \{d\} \{e\} \rangle$	$\langle \{a\} \{e\} \rangle$	No
$\langle \{a\} \{b,c\} \{d,e\} \{e,f\} \rangle$	$\langle \{b\} \{d\} \{g\} \rangle$	
$\langle \{a,b\} \{c\} \{d,e\} \{f,g\} \{h,i\} \{j,k\} \rangle$	$\langle \{a,b\} \{k\} \rangle$	

Timing Constraints

max-gap = 2

$\langle \{a,b\} \{c\} \{d,e\} \{f,g\} \{h,i\} \{j,k\} \rangle$	$\langle \{a,b\} \{k\} \rangle$	No

Mining Sequential Patterns with Timing Constraints

- Approach 1:
 - Mine sequential patterns without timing constraints
 - Post-process the discovered patterns
- Approach 2:
 - Modify algorithm to directly prune candidates that violate timing constraints

Approaches and Data preparation

Consider only these state codes:

- Forced Outage (21) or Maintenance Outage (24) to a Planned Outage (25)
